True Asymmetrical Lifts
Columns are rotated 30° allowing maximum door opening on passenger cars for improved access to vehicle interior. This column rotation places the approximate center of gravity of the vehicle in line with the optimum load capability of the column, reducing unnecessary wear and tear on the column, carriage, and bearings.

Shockwave’s patent pending DC power system gives you lower cost and more reliable operation while using two standard Group 24 batteries. Shockwave’s built in battery charger uses 110v power, eliminating the need for expensive 220v wiring resulting in an installation savings of 80% or more. And, if your shop loses power, SHOCKWAVE-equipped lifts keep working.
